Steps to set-up MinGW

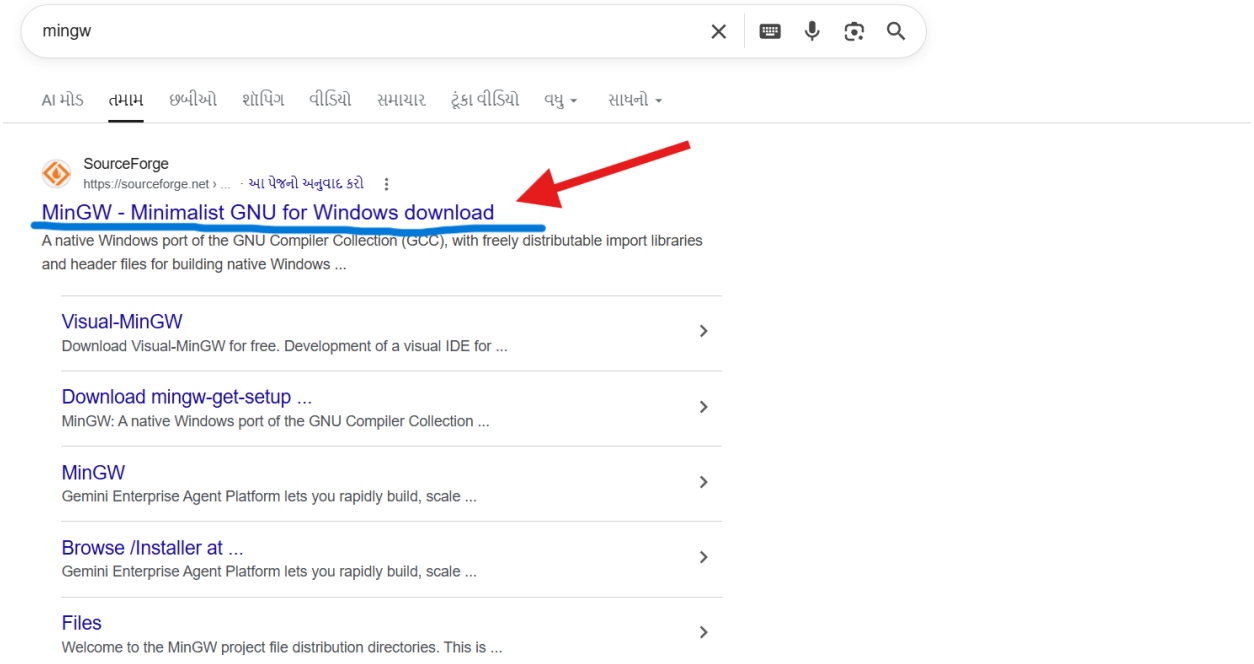

1. Search “visual studio code” in google chrome and click on the first link.

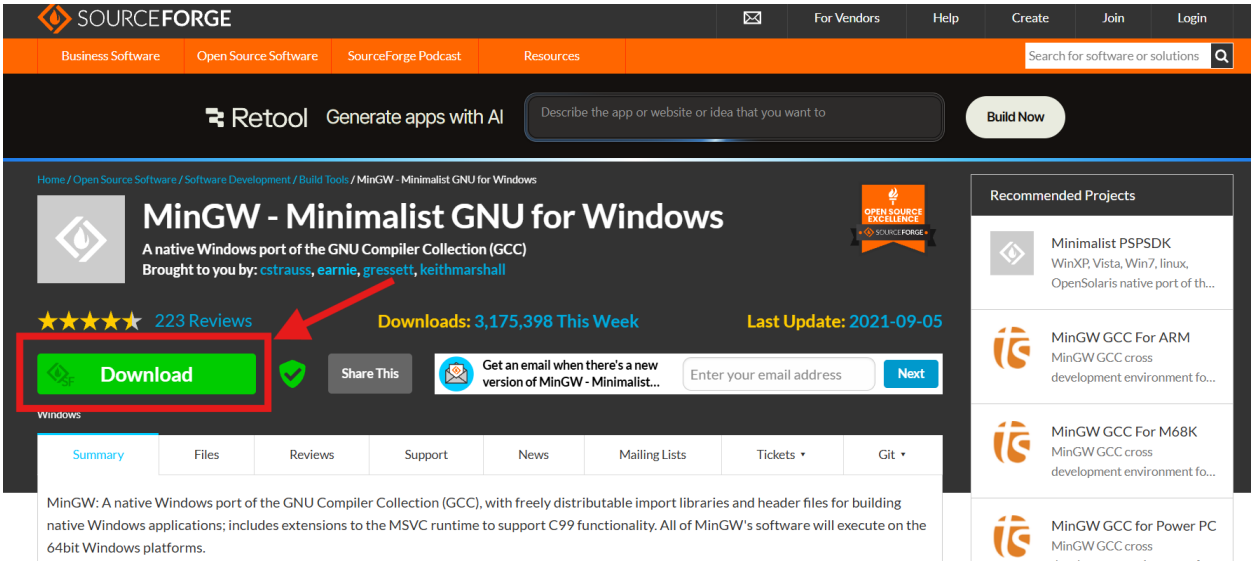

2. Click on the “Download for Windows” and it will started dowanload.

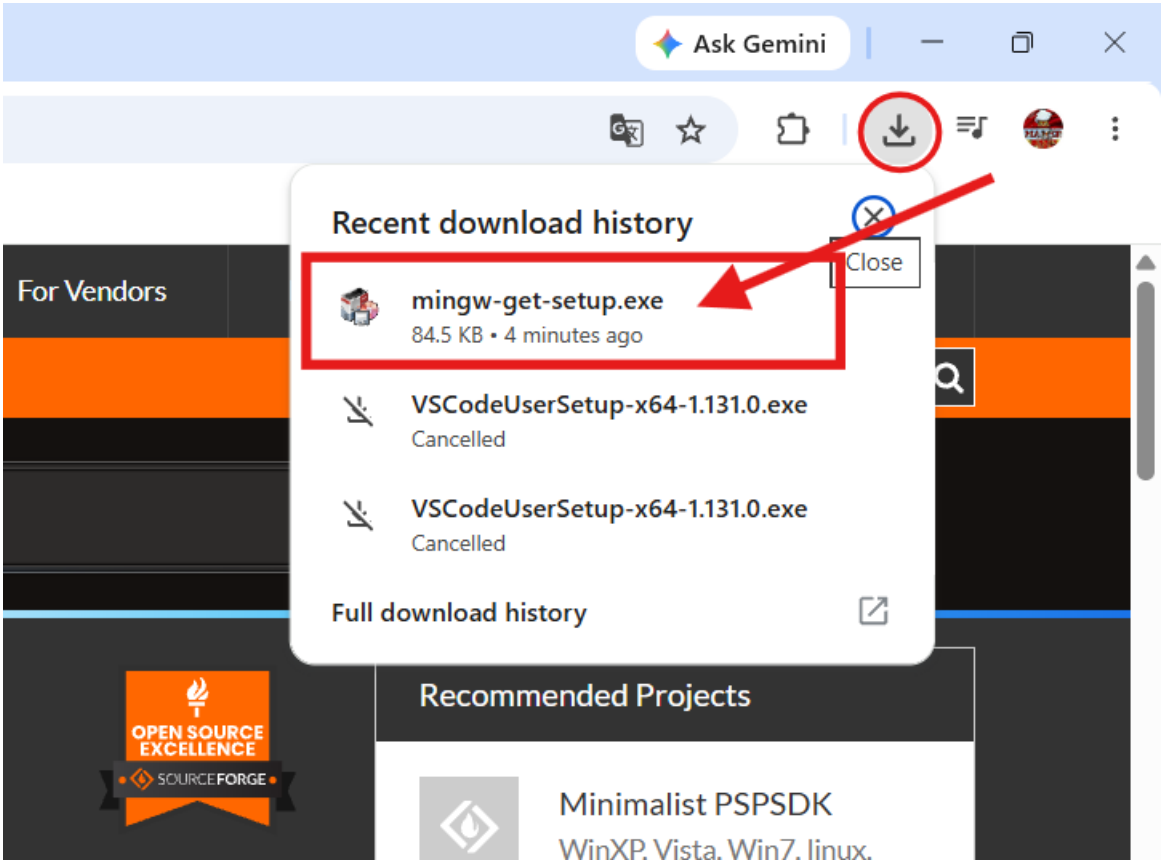

3. Search “mingw” in google chrome and open the first link

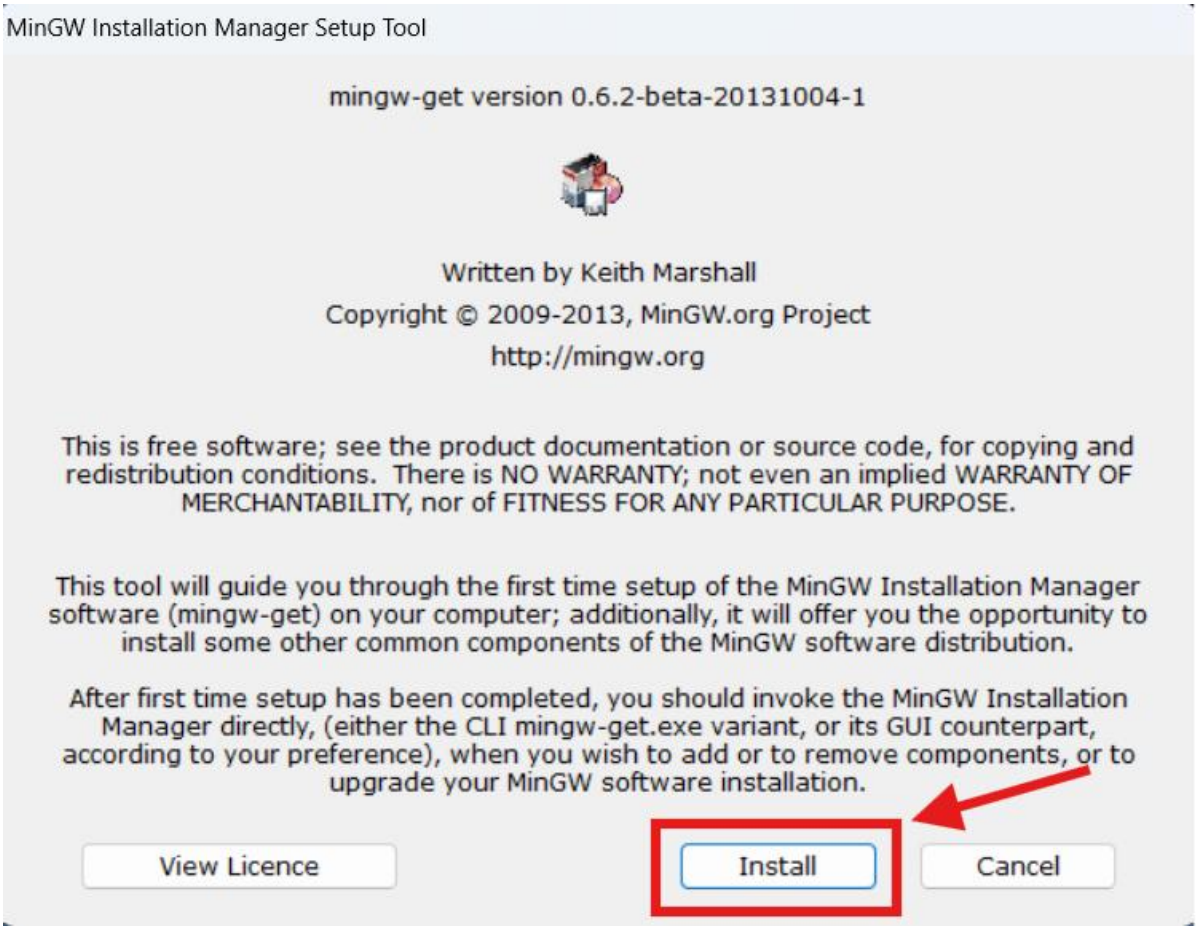

4. Click on the “Download” button and The downlad will be start in 5 sec.

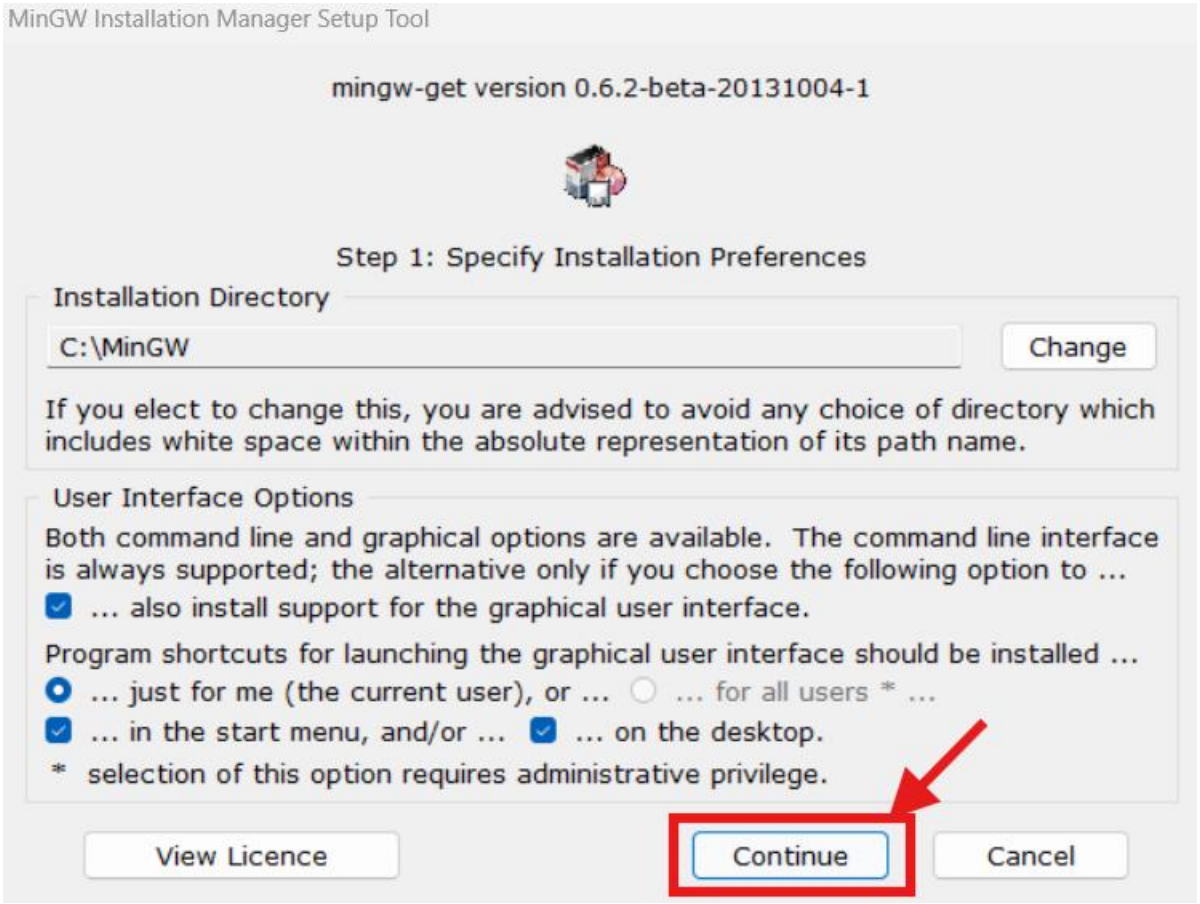

5. Then click on the download icon and click on “mingw-get-setup”.

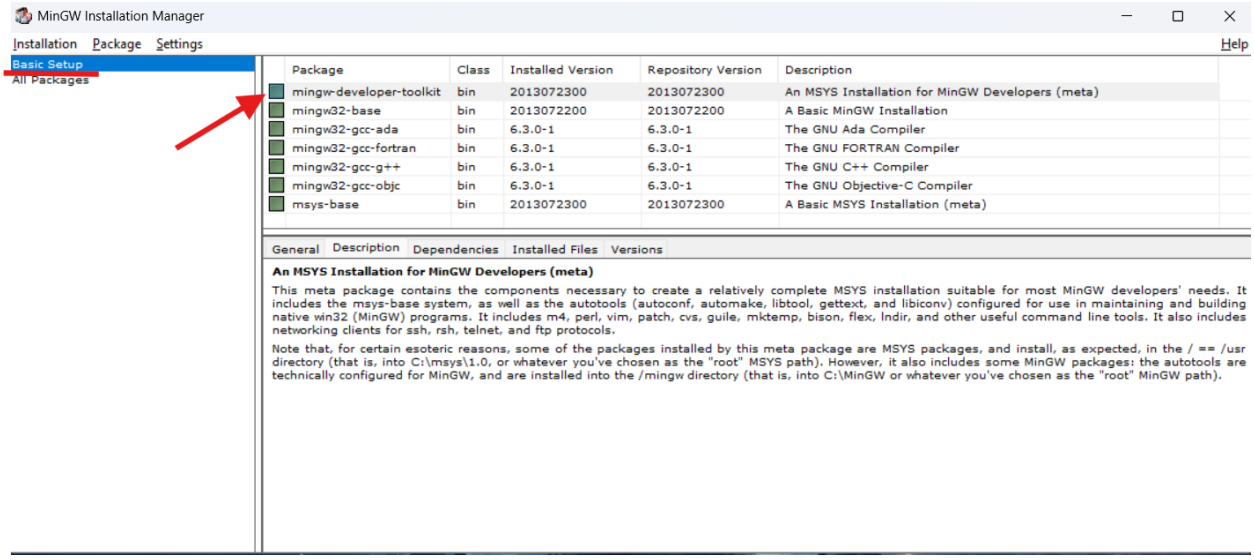

6. Click on the “Install” Button.

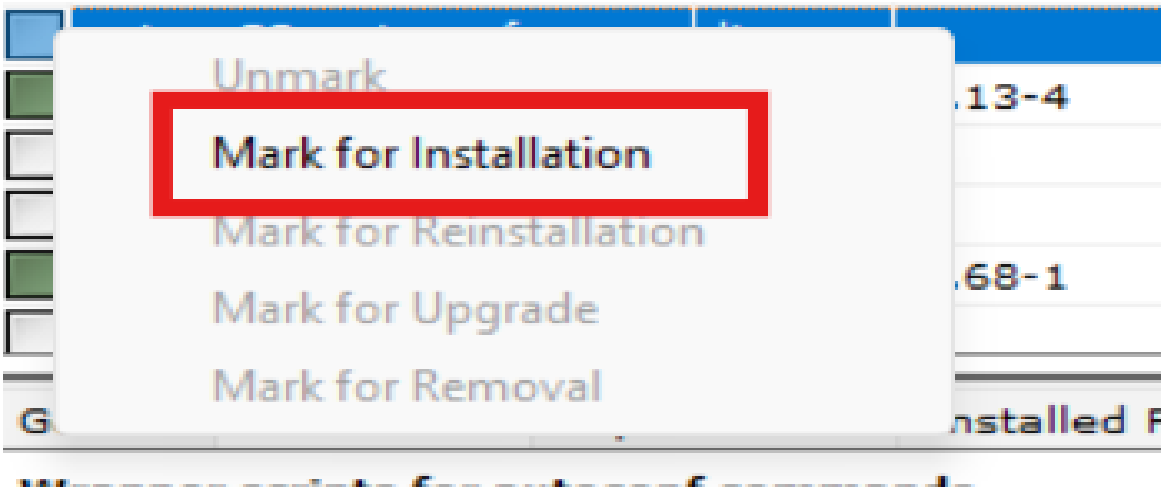

7. Click on the “Continue” button.

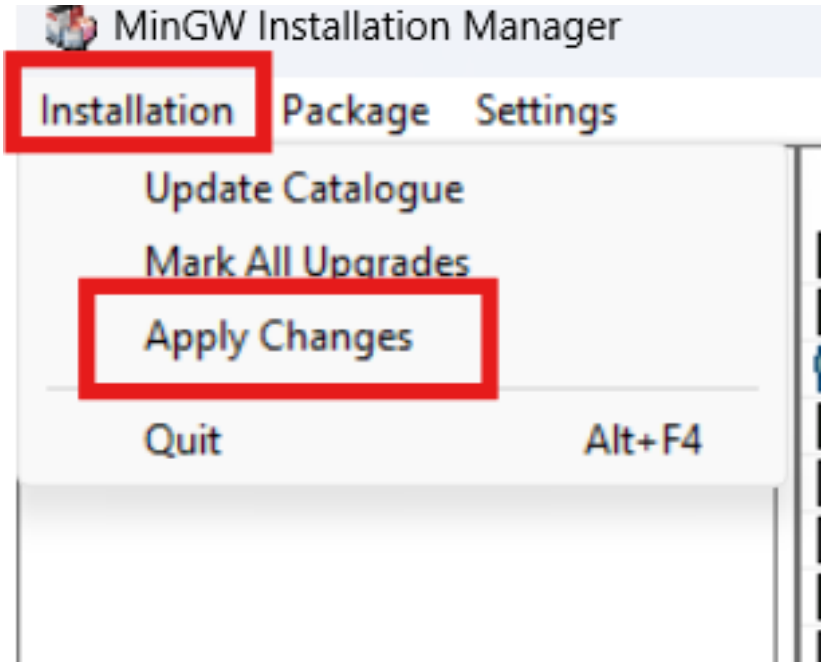

8. Then this type of interface will open and click on “Basic Setup” (on left side).click on the check box(my check box are green because it is already installed in my pc. Your check box are empty and white.)

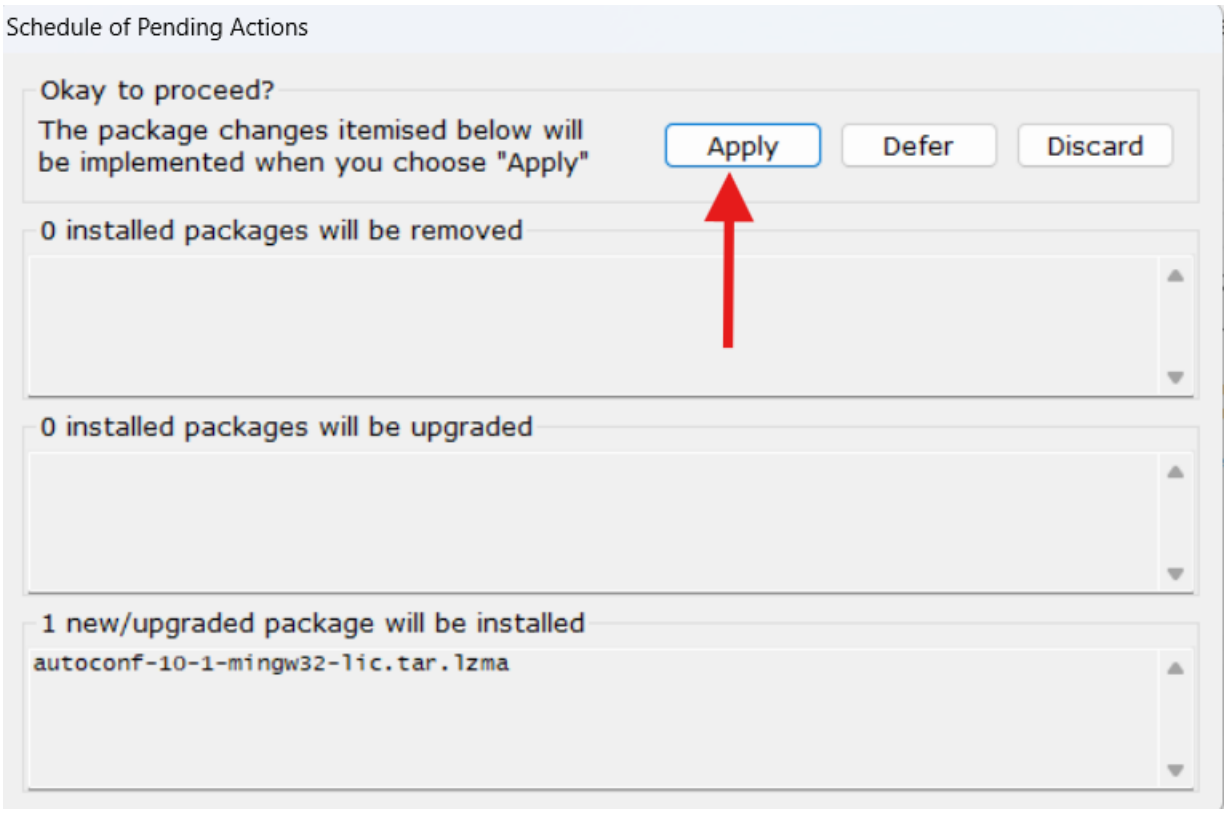

9. When you click on the check box this type of interface will be shown and click on the “Mark for Installation”. Do this for all check box in basic setup.

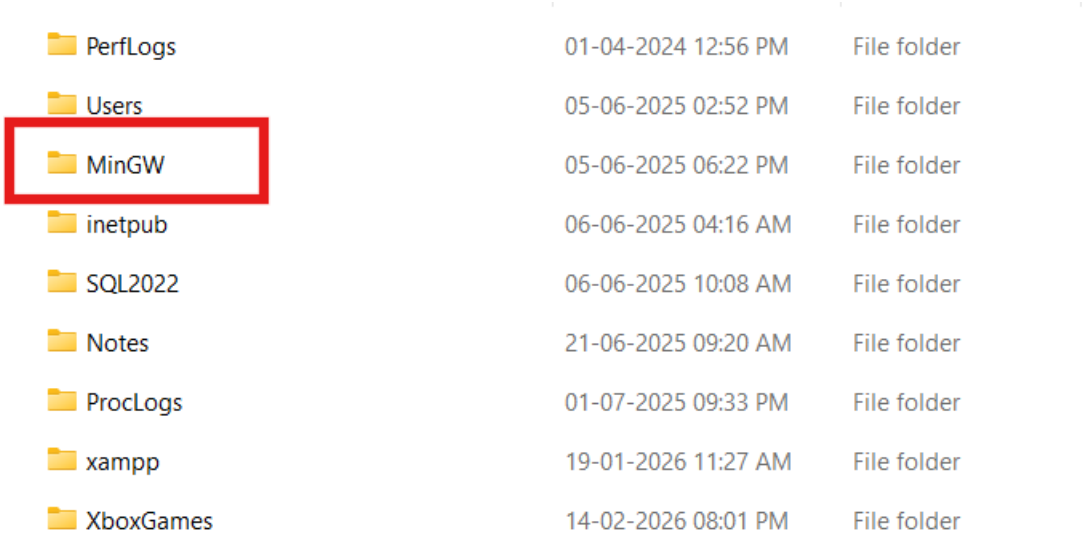

10. Then click on the “Installation” and then click on the “Apply Changes”.

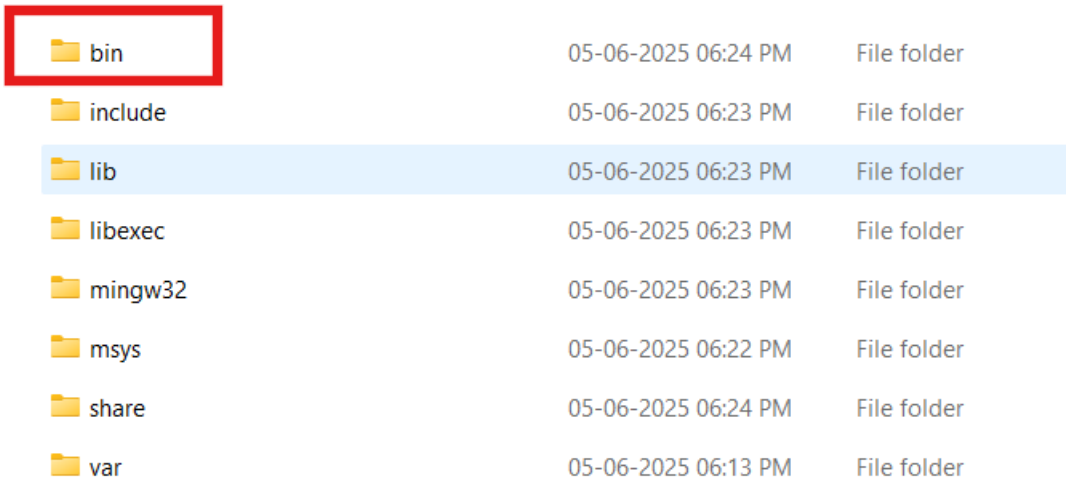

11. Click on “Apply”

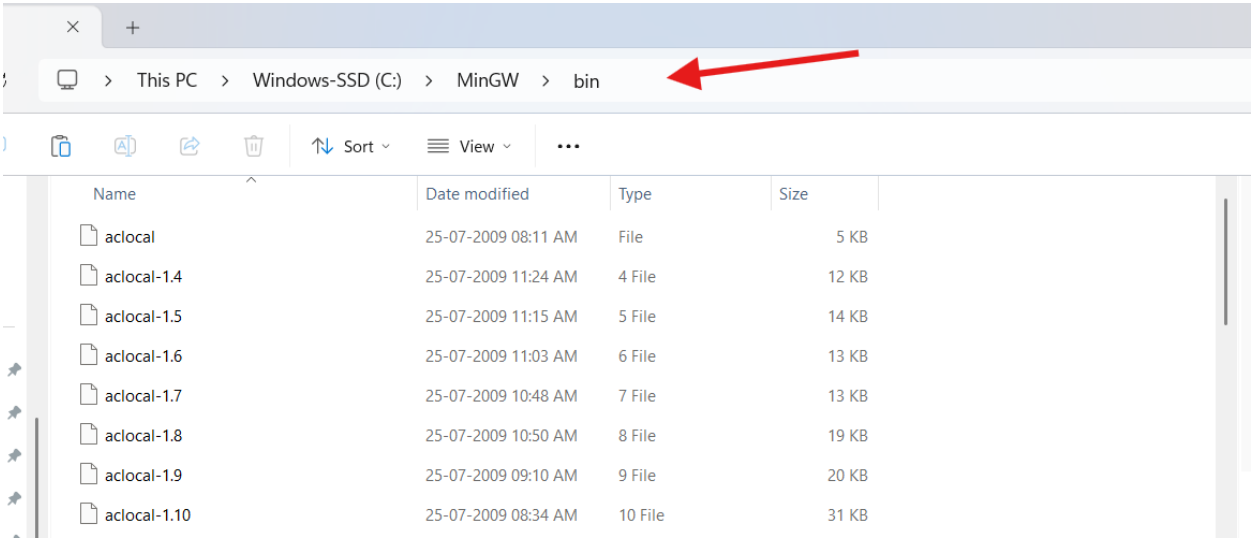

12. Let the packages install. This will take some time. Then click close.
13. Then open the file explorer or mypc and go to your drive(most probably c).
14. There you can see “MinGW” folder go inside the folder.

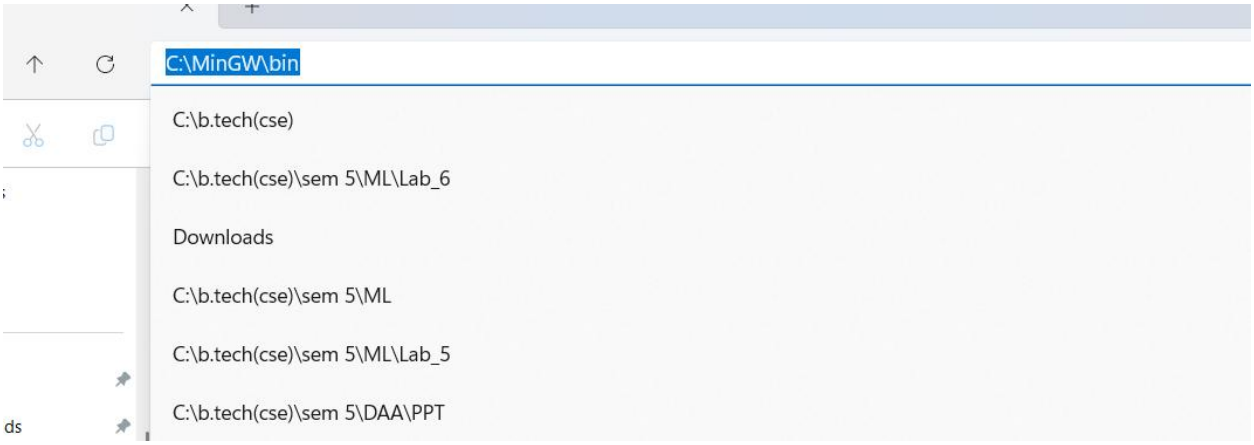

15. Then go in the “bin folder”.

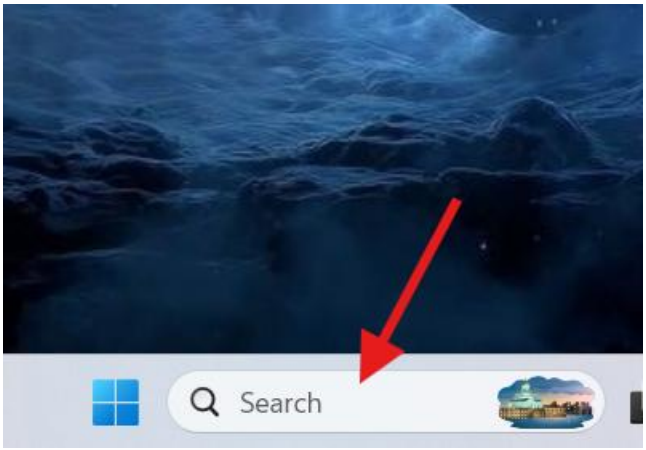

16. Then click on the path.

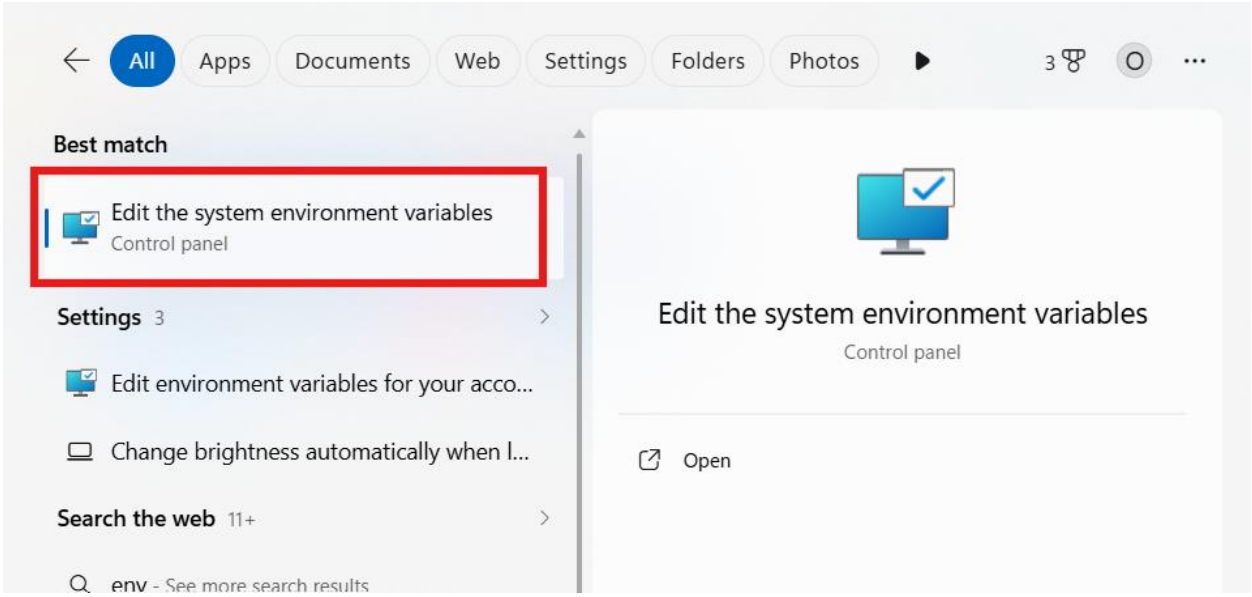

17. Then copy (Ctrl + C) the path.

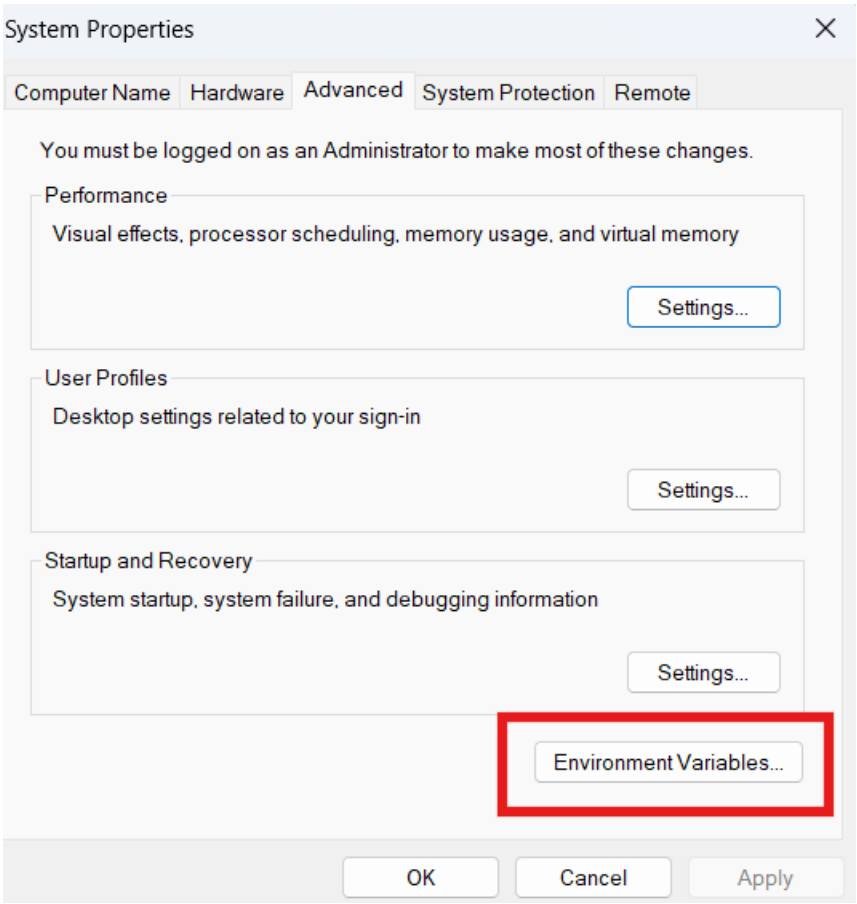

18. Then come outside and click on the search button.

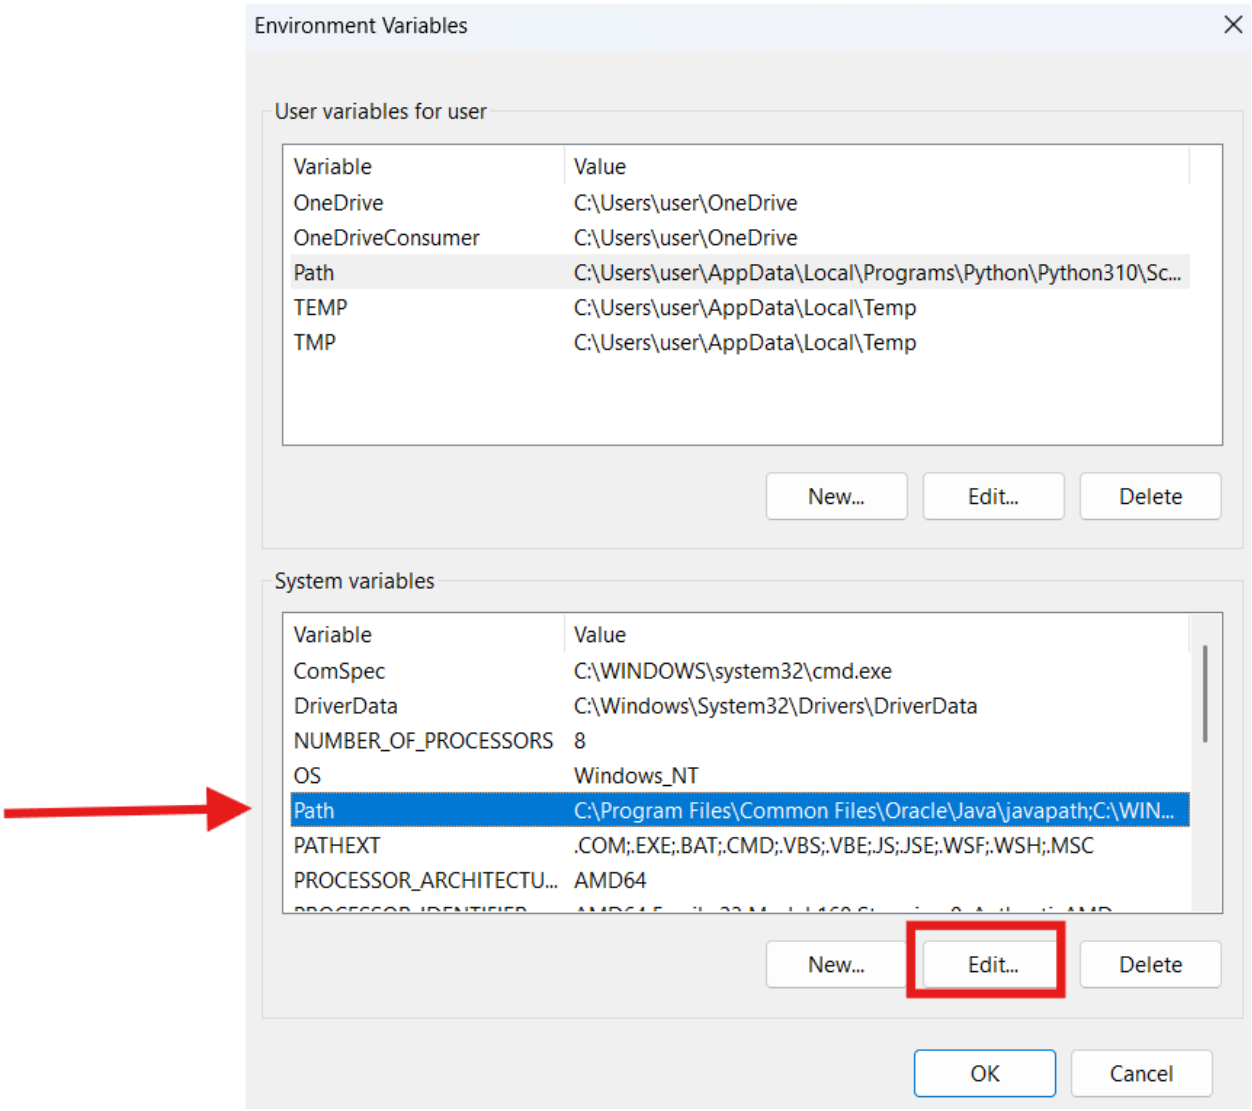

19. Then type “Environment variable” and open “Edit the system environment variable”.

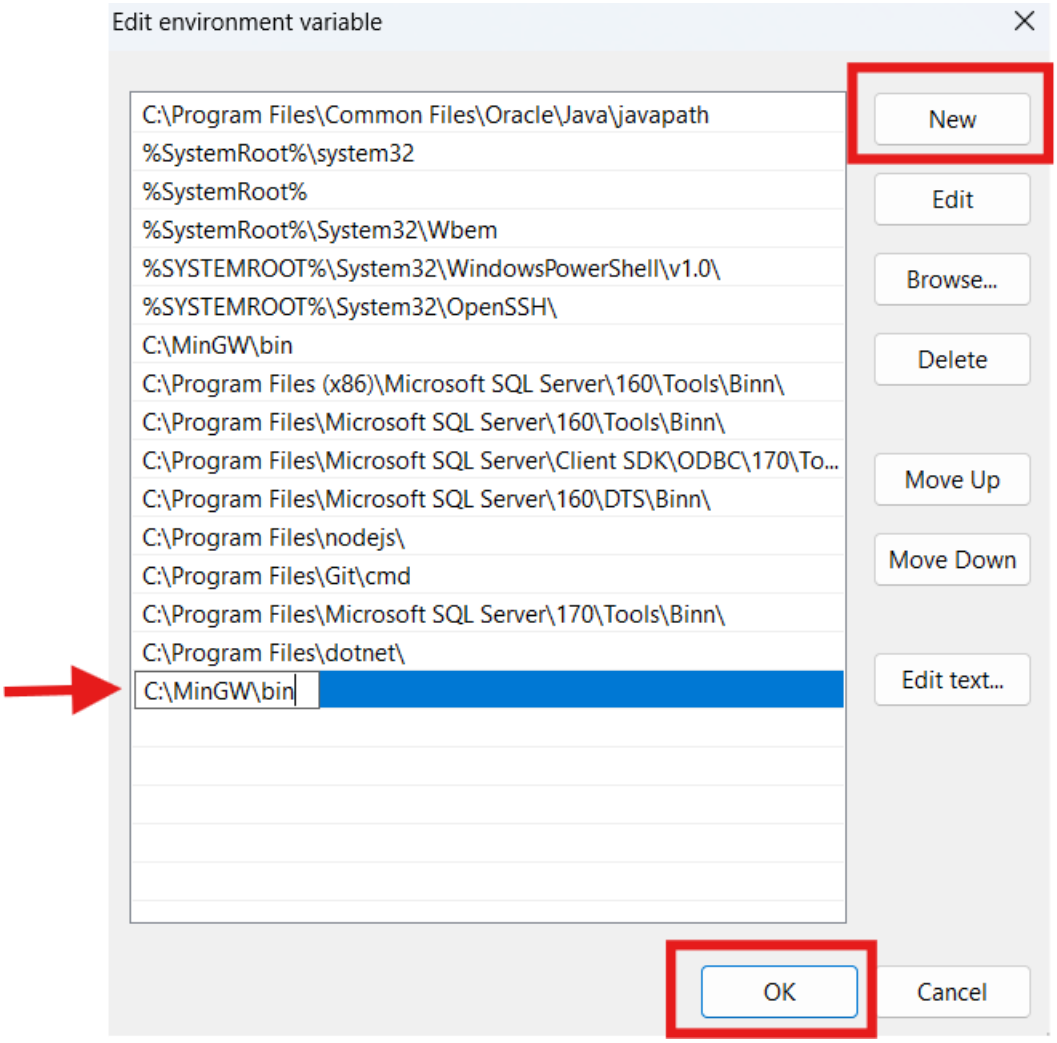

20. Click on the “Environment Variables”.

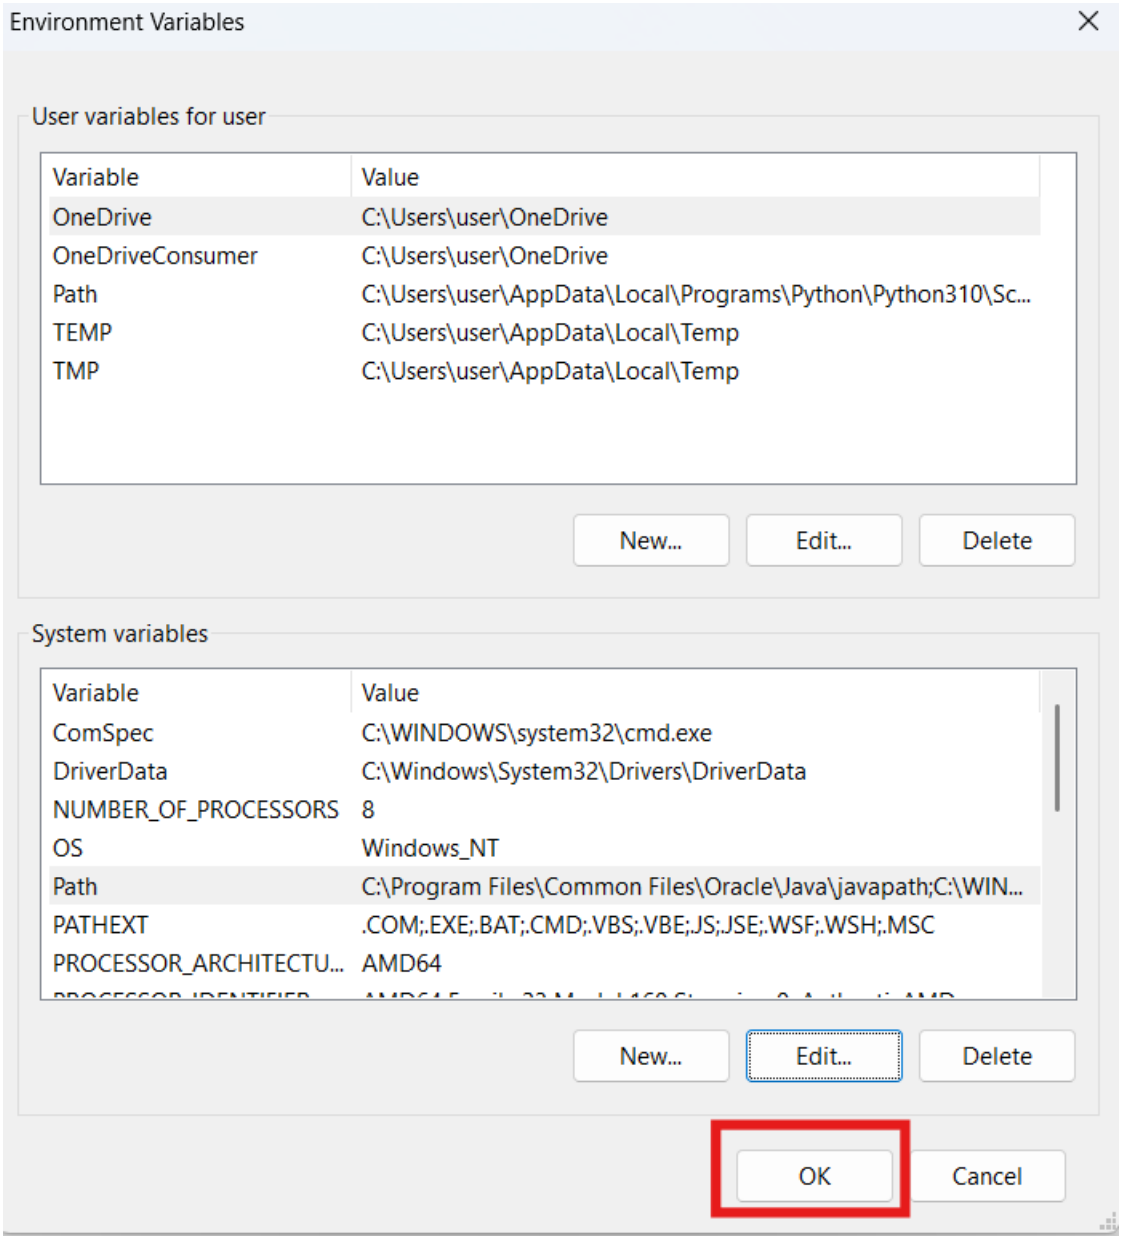

21. Select path and click on the “edit” button.

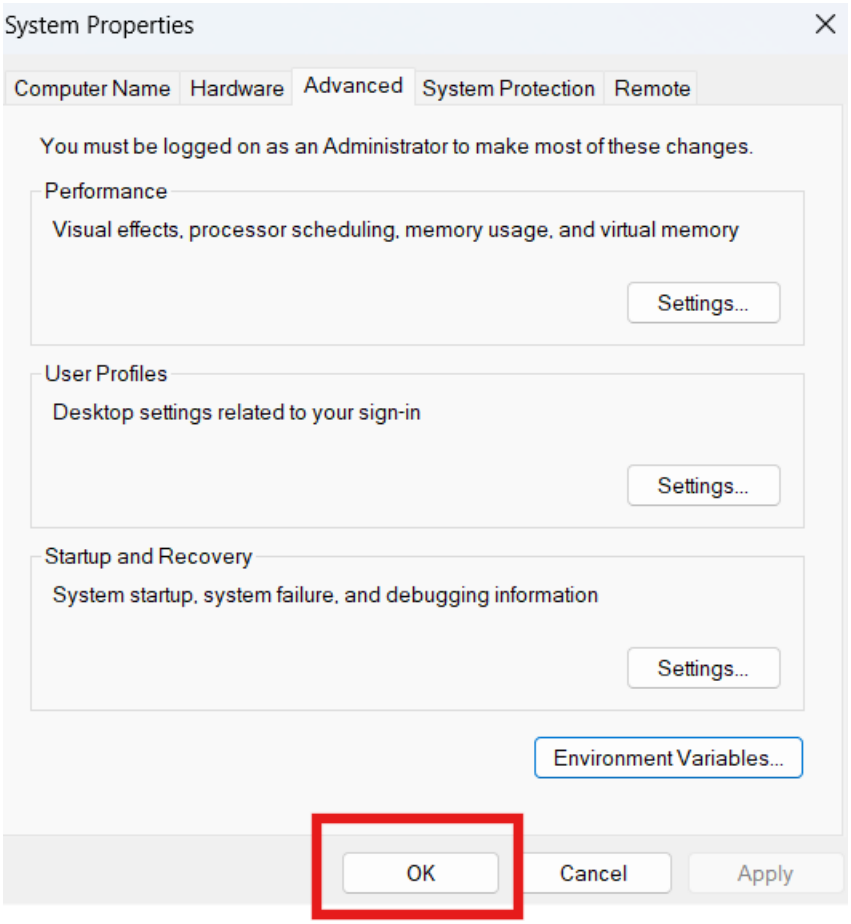

22. Click on “New” button and paste(Ctrl + v) your MinGW path. and click “Ok”.

23. Click “ok” again.

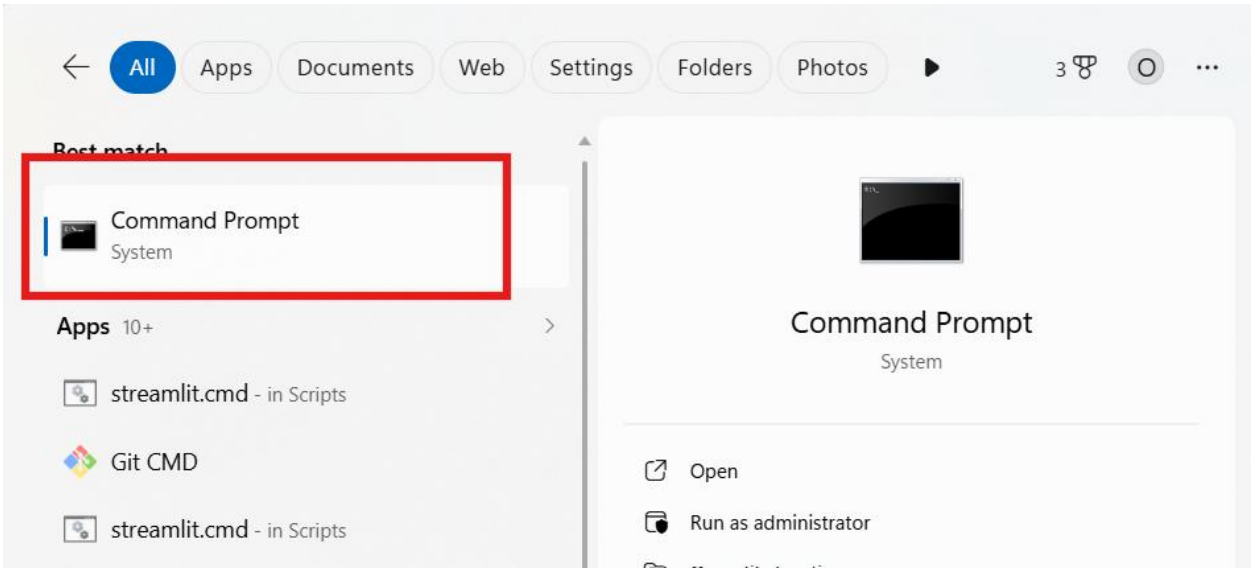

24. Click “ok” again.

25. After this ok our set-up is completed.

1. Check IF it is correctly done or not.
   Search Cmd and click on it.

2. Type g++ --version and Enter.
   if version is shown then everything is ok.
